Abstracts

Condensate recovery pump system is a device used to recover and reuse condensate generated by steam systems in industrial or commercial facilities. During the steam heating process, steam releases heat and condenses into water, which is called condensate. The condensate recovery pump system recovers this part of water through a pump and transports it back to the boiler or other heat exchange system for reuse. This system can save a lot of energy and water resources while reducing environmental pollution.

The global Condensate Recovery Pump Systems market size was estimated at USD 477.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
