Report Overview

Condiment filling machine is one of the common filling equipment in the food industry. It is mainly used for the packaging and filling of condiments, sauces, salad dressings, jams, milk, soy milk and other liquids or semi-fluids with strong fluidity. The condiment filling machine can be customized according to the size, shape, and material of the bottle. It is generally divided into different types such as single head, double head, and four heads. It has the characteristics of high speed, high efficiency, high precision, and low error.

The working principle of the condiment filling machine is realized by adopting technologies such as servo system, PLC control system and man-machine interface. Liquid or semi-fluid condiments first enter the filling machine through conveyor belts, etc., then go through the intensive metering system for quantitative filling, and then seal the bottle through the capping system, and finally transport it to the next link for the next step.
