## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Conductivity Temperature Depth(CTD) Profiler competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Conductivity temperature depth(CTD) profiler is an oceanographic instrument used to measure the conductivity, temperature and pressure of seawater. It usually consists of one or more sensors, including conductivity sensors, temperature sensors and pressure sensors. They are usually mounted on a device called a CTD probe, which can be attached to a buoy, vessel or submersible via a rope or rigging. This enables real-time monitoring and recording of ocean temperatures, providing data support and reference. Under the background of global warming, ocean data collection has been upgraded from a "scientific research auxiliary tool" to a "core infrastructure for strategic resources". Countries have increased their requirements for the accuracy of deep-sea mineral exploration, fishery resource assessment and climate models, driving the accuracy standard of Conductivity Temperature Depth(CTD) Profilers to jump from thousandths to ten-thousandths. In terms of technology, the innovation and development of Conductivity Temperature Depth(CTD) Profilers are accelerating. Modern temperature-salinity-depth analyzers use advanced sensors and data acquisition technologies, which can achieve high-precision, high-sensitivity real-time monitoring. At the same time, the trend of intelligence and automation has also made the operation of the instrument easier, and the efficiency of data processing and analysis has been significantly improved. In terms of competition, European and American companies represented by Sea-Bird Scientific, Xylem, and Teledyne Valeport have long monopolized the deep-sea high-precision CTD market, and their products have stability advantages in extreme environments such as 10,000-meter detection.

The global Conductivity Temperature Depth(CTD) Profiler market size was estimated at USD 399.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
