Report Overview

A conformal coating is a very thin protective material applied to a printed circuit board (PCB) on which a plug-in component has been soldered. It can enhance the moisture-proof and anti-fouling ability of electronic circuits and components and prevent erosion of solder joints and conductors. It can also play a role in shielding and eliminating electromagnetic interference and preventing short-circuit of the circuit, and improve the insulation performance of circuit boards. In addition, the protective coating film is also beneficial to the friction and solvent resistance of the circuit and components, and can release the pressure caused by periodic changes in temperature, improve the stability of electronic products, and extend the service life.
