Abstracts

A conical plate centrifuge, also known as a disc stack centrifuge, is a high-speed separation device designed to separate immiscible liquids and solids from liquids using centrifugal force generated by a rotating bowl containing a stack of conical discs; these discs increase the effective settling area and enhance separation efficiency by reducing the distance particles must travel, making it particularly effective for applications requiring continuous, high-throughput processing such as clarifying liquids, concentrating solids, or separating liquid-liquid mixtures based on density differences in industries like food and beverage, pharmaceuticals, chemicals, and wastewater treatment.

The global Conical Plate Centrifuge market size was estimated at USD 1235.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
