Abstracts

The connecting link is the core basic component in the field of mechanical transmission and lifting. Its products include standard chain links, anchor chain links, transmission chain links, etc., following international standards such as DIN 766 and ISO 1834. The specifications range from micro (φ0.5mm) to heavy (φ200mm), and the materials range from carbon steel, stainless steel and titanium alloy. The breaking strength can reach more than 1,500 tons, and it is widely used in marine engineering, aerospace, intelligent manufacturing and other fields. The CAGR in the past five years is 7.9%. It is mainly driven by offshore wind power, robotic automation and infrastructure demand in emerging markets. The upstream of the industrial chain relies on special materials such as high-carbon steel, titanium alloy and precision forging equipment, and the downstream is driven by policies (such as China's "14th Five-Year Plan" localization goals) and technology (5G+IoT smart monitoring). At present, domestic substitution has made progress in the mid-end market (such as the low cost of Zhejiang Sixiong Rope Industry's carbon fiber composite chain links).

The global Connecting Links market size was estimated at USD 1258.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.90% during the forecast period.
