Abstracts

A constant CFM (cubic feet per minute) air handler is a specialized HVAC component designed to maintain a fixed airflow rate regardless of changes in external conditions, such as duct static pressure or filter loading. This is achieved through integrated controls, such as electronic variable-speed motors and pressure sensors, which continuously adjust fan speed to deliver consistent air volume to conditioned spaces. Unlike conventional fixed-speed air handlers, constant CFM systems prioritize precise ventilation, temperature distribution, and humidity control, making them particularly suitable for applications requiring strict air quality standards, stable pressurization, or compliance with energy codes that mandate demand-controlled ventilation. They are commonly used in commercial, healthcare, laboratory, and high-performance residential buildings where airflow stability directly impacts occupant comfort, process integrity, or energy efficiency.

The global Constant Cfm Air Handler market size was estimated at USD 4800.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
