Abstracts

Constant flow control damper is a device specially designed to control the flow of fluids (such as air). It can provide a stable flow output in the fluid system, which is not affected by external pressure changes or system load fluctuations. The damper accurately adjusts the flow of the fluid through built-in flow control mechanisms such as throttling orifice plates, regulating valve cores, etc. In addition, the constant flow control damper also has excellent stability and durability, and can continue to operate in harsh working environments and maintain high-precision flow control. It is widely used in various occasions that require precise control of fluid flow, such as HVAC systems, industrial fluid control systems, etc.

The global Constant Flow Control Damper market size was estimated at USD 1127.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.70% during the forecast period.
