Report Overview

A constant speed propeller is a variable-pitch aircraft propeller that automatically changes its blade pitch in order to maintain a chosen rotational speed. The power delivered is proportional to the arithmetic product of rotational speed and torque (radians/second \times torque), and the propeller operation places emphasis on torque. The operation better suits modern engines, particularly supercharged and gas turbine types. Here are three advantages of constant speed props: optimized performance in each stage of flight, improved fuel efficiency and reduced strain on the engine.
