Abstracts

A sealant is typically a viscous material that becomes solid upon application, where it creates a barrier. The sealant barrier inhibits the penetration of many different elements, such as liquid, air, fire, or noise, depending on the exact nature of the sealant. A sealant is generally used to close gaps that other materials cannot successfully close. An adhesive is a mixture that bonds items together and can exist in many states, such as liquid or powder. It often requires the application of a set temperature to cure it and is frequently used to bond thin materials. Some very strong sealants qualify as adhesives, but weaker sealants primarily fill space, as is the case with sealant putty.

The global Construction Adhesives And Sealants market size was estimated at USD 21190.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.80% during the forecast period.
