Abstracts

ERP systems (Enterprise Resource Planning Systems) are integrated management information systems designed to help businesses optimize business processes, improve operational efficiency, and achieve effective utilization of resources. The construction ERP systems offer a range of solutions to help construction companies improve operational efficiency, reduce costs, and better manage complex business processes. Global Market Future Development Trends First, cloud-based and mobile technologies will become the mainstream forms of ERP systems in the construction industry. Complex engineering projects are widely distributed and involve many participants, creating a stronger demand for real-time collaboration across regions and multiple projects. SaaS/cloud ERP systems, accessible via browsers and mobile devices, facilitate dynamic on-site data entry and remote approval. Furthermore, pay-per-project pricing and flexible scaling help lower the barriers to IT adoption for small and medium-sized construction companies. Second, construction industry ERP will upgrade from a "financial + cost management system" to a "full lifecycle operation platform for engineering projects." The system will be deeply integrated with modules such as BIM, project progress, bidding, materials and equipment, labor, and safety and quality, achieving integrated management of business and finance, and production and supply. It will also pre-define industry templates and standard reports for specific sectors such as building construction, municipal engineering, infrastructure, prefabricated construction, and electromechanical installation, improving implementation efficiency. Third, data intelligence and ecosystem collaboration are key to future competition. By leveraging IoT, GIS, big data, and AI, construction ERP can predict and provide early warnings about cost deviations, schedule risks, and cash flow pressures, assisting management in decision-making. At the same time, by connecting with electronic signatures, tax platforms, government regulatory platforms, and third-party construction management and collaborative design tools through open APIs, it

forms an ecological solution that strengthens compliance and lean management capabilities.

The global Construction ERP System market size was estimated at USD 3854.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.00% during the forecast period.
