Abstracts

Construction glass film is a specialized polymer-based material applied to the interior or exterior surfaces of glass in residential, commercial, and industrial buildings to enhance functionality, safety, and energy efficiency. These films are engineered to provide a range of benefits, including solar control to reduce heat and glare, UV protection to prevent fading of interior furnishings, safety and security by holding shattered glass in place, and decorative options for privacy or branding. They can be clear, tinted, reflective, or patterned, and are often used as an alternative to window replacement or secondary glazing due to their cost-effectiveness and ease of installation. The product serves both practical and aesthetic purposes, addressing needs such as thermal insulation, occupant comfort, and compliance with building energy codes.
