Report Overview

Construction Luffing jib tower cranes, which are a type of top-slewing crane, have an angled rather than horizontal jib. Unlike other tower cranes which have a trolley that controls the lateral movement of the load, luffing jib cranes move their load by changing the angle of the jib. The angle is modified using either a cable controlled by a luffing winch or hydraulic cylinder. The cranes are utilized primarily in urban areas where space is constrained or in situations where several cranes are installed close together.

The global Construction Luffing Jib Tower Cranes market size was estimated at USD 238.60 million in 2023 and is projected to reach USD 256.34 million by 2032, exhibiting a CAGR of 0.80% during the forecast period.

North America Construction Luffing Jib Tower Cranes market size was estimated at USD 63.03 million in 2023, at a CAGR of 0.69% during the forecast period of 2024 through 2032.
