### Report Overview:

Construction Luffing jib tower cranes, which are a type of top-slewing crane, have an angled rather than horizontal jib. Unlike other tower cranes which have a trolley that controls the lateral movement of the load, luffing jib cranes move their load by changing the angle of the jib. The angle is modified using either a cable controlled by a luffing winch or hydraulic cylinder. The cranes are utilized primarily in urban areas where space is constrained or in situations where several cranes are installed close together.
