Abstracts

Electric construction machinery refers to construction machinery that is powered by electricity rather than traditional fuel engines, including electric excavators, loaders, etc. These devices are widely used in infrastructure construction and other fields due to their environmental protection, high efficiency and low noise. The electric construction machinery market is in a rapid development stage. Benefiting from the promotion of environmental protection policies and technological progress, its market demand is growing rapidly. As countries' restrictions on carbon emissions become increasingly stringent, more and more construction machinery manufacturers are beginning to launch electrified products to meet the market's demand for low-emission, low-noise and high-efficiency equipment. At the same time, the cost reduction and performance improvement of key components such as lithium batteries have further promoted the popularization of electrified construction machinery. Although electric construction machinery still accounts for a small proportion of the overall market share, with the continuous maturity of technology and increased policy support, it is expected that this market will continue to expand in the next few years and gradually become an important development direction for the construction machinery industry.

The global Construction Machinery Electrification market size was estimated at USD 2756.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 46.60% during the forecast period.
