Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Construction Slag Crushing Equipment competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The Construction Slag Crushing Equipment is a complete mobile crushing and screening production line consisting of a raw material silo placed on one or more tractor trailers, a vibrating feeder, coarse crushing equipment, a multi-layer vibrating screen, secondary crushing equipment, fine crushing equipment, a mobile belt conveyor, a sand washer, an electrical control system and other components. It is mainly used for crushing operations that require frequent movement and relocation in industries such as highways, railways, metallurgy, chemicals, and building materials. Sales in 2024 are expected to reach 3,150 units, with an average price of US\$320,000.1. Market Overview As the green transformation and circular economy concepts of the construction industry gain traction, the market for construction waste crushing and processing equipment is poised for sustained growth. Over the next three to five years, equipment will develop towards intelligent, efficient, and environmentally friendly features. In particular, the widespread adoption of mobile crushing equipment and automated control systems will significantly enhance the resource utilization of construction waste. Accelerated infrastructure development in emerging markets such as Southeast Asia and Africa also provides broad growth potential for this equipment sector. Companies that can combine digital transformation with green manufacturing to seize technological leadership will gain a competitive advantage in the global construction waste processing equipment market.2. Product Type Description Jaw crushers (accounting for approximately 50% of the market) utilize fixed and movable jaws to crush construction waste. Their robust structure and wide adaptability make them suitable for processing large, hard construction waste and are widely used in large-

scale demolition projects and recycled aggregate production lines. Impact crushers (accounting for approximately 30% of the market) utilize the impact force of high-speed rotors to crush materials. They are suitable for medium-hard construction waste, achieving fine crushing results and are commonly used for concrete and brick and tile waste. Their simple structure and easy maintenance make them suitable for small and medium-sized projects. Cone crushers (accounting for approximately 20%) crush materials through the rotation of their cones. They are suitable for processing hard and highly abrasive construction waste, offering high crushing ratios and fine-grained output. They are commonly used in high-end building material recycling and aggregate fine processing.

3. Technology Trends and Innovation Directions

Intelligent control systems (integrated with PLC and remote monitoring platforms, enabling real-time monitoring of equipment operating status, automatic alarms, and maintenance predictions, improving management efficiency and equipment stability). High-efficiency and energy-saving design (optimized crushing chamber structure and motor drive system, using variable frequency speed regulation and energy-saving and emission reduction technologies to reduce energy consumption and operating costs). Modularity and integration (the modular design of the equipment facilitates rapid assembly and on-site disassembly, while also enabling efficient integration with screening and conveying systems to meet diverse operating requirements). Wear-resistant material innovation (using new high-wear-resistant alloy materials and surface treatment processes to extend the service life of key components and reduce maintenance frequency and costs). Environmentally friendly noise reduction technology (optimized mechanical structure and vibration reduction system to achieve low-noise operation, meeting urban demolition and environmental protection requirements).

4. Application Scenario Description

Construction site demolition (requires rapid on-site crushing and processing of various types of construction waste, reducing transportation costs and improving resource utilization). Recycled aggregate plants (focus on crushing efficiency and aggregate particle size uniformity to meet the production standards for recycled concrete and environmentally friendly building materials). Municipal solid waste treatment centers (comprehensively process mixed construction waste and domestic waste, requiring equipment with high reliability and easy maintenance). Environmentally friendly building materials companies (have high requirements for the cleanliness and particle size of crushed materials, driving the development of refined and automated crushing equipment).

The global Construction Slag Crushing Equipment market size was estimated at USD 1080.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.00% during the forecast period.
