## Abstracts

Consumer Battery 3C Certification is a compulsory product certification system implemented by the Chinese government, and its full name is "China Compulsory Certification" (CCC). The system aims to protect the personal safety of consumers, national security and environmental safety, and ensure that consumer battery products meet national safety standards by implementing product conformity assessment in accordance with the law. The industry's gross profit margin is approximately 25-35%. Market drivers mainly include the following: Stricter policy regulations are forcing the industry to comply with regulations. Since June 28, 2025, the Civil Aviation Administration of China has been mandating the inspection of 3C labels on power banks. Airports nationwide intercepted over 3,000 unlicensed products daily, forcing business travelers to switch to compliant equipment, resulting in a surge in short-term demand. At the same time, the State Administration for Market Regulation is cracking down on counterfeit certification marks, requiring the use of holographic laser anti-counterfeiting technology, allowing consumers to verify authenticity through official platforms. Under this policy pressure, Romoss recalled 490,000 products due to battery cell safety concerns, and small and medium-sized manufacturers exited the market due to certification costs, significantly increasing industry concentration. Frequent safety incidents and upgraded consumer demand. Recalls by leading brands exposed supply chain and quality control loopholes, leading consumers to turn to brands like Huawei and Xiaomi, which were not involved in recalls. Surveys show that 86% of users consider 3C certification a primary selection criterion, driving companies to increase investment in safety R&D. For example, Huawei power banks, using lithium polymer cells and six-fold safety protection, are still well-received despite a 20 yuan premium, while cheaper secondhand products are met with resistance due to the risk of aging cells. Accelerated technological iteration and product differentiation competition. Fast charging technology (such as 65W PD fast charging) and long battery life (such as

20,000 mAh capacity) have become the focus of competition, with companies increasing added value through technological innovation. For example, Anker Innovations launched a power bank that supports temperatures as low as -20°C, expanding into the outdoor market; Baseus launched a magnetic wireless power bank compatible with Apple's MagSafe ecosystem. Increased technological barriers have prompted the industry to shift from "low-price competition" to a dual-driven track of "safety + performance."

The global Consumer Battery 3C Certification market size was estimated at USD 132.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 13.90% during the forecast period.
