Abstracts

A consumer-grade multimodal conversational AI platform is an intelligent system designed for individual consumers. It integrates multiple communication methods such as voice, text, images, and video to enable natural and efficient interaction between users and the AI. It has a simple and intuitive interface, making it easy for ordinary consumers to use without the need for professional technical knowledge. It can learn about the user's preferences, habits, and historical interaction records to provide personalized services. It supports seamless switching and combination of multiple interaction modes. Users can start an interaction in text mode and then switch to voice mode if needed, or provide additional information through images or videos.

Technical Principles-

- Multimodal Data Acquisition:** It uses a variety of sensors and input devices to collect data. For example, microphones capture voice information, cameras capture image and video data, and text can be input through keyboards or other text - entry methods.
- Multimodal Data Fusion:** This is a key technology that combines data from different modalities. For example, when a user asks a question verbally and shows a relevant picture, the platform fuses the voice and image data to understand the user's intention comprehensively. Common fusion methods include early - stage fusion, late - stage fusion, and intermediate - stage fusion.
- Natural Language Processing (NLP):** It is used to understand and generate text. It includes tasks such as lexical analysis, syntactic analysis, semantic understanding, and discourse processing. The platform can understand the meaning of the user's text input, extract key information, and generate appropriate text responses.
- Speech Technology:** This includes speech recognition and speech synthesis. Speech recognition converts spoken language into text, and speech synthesis generates human - like speech from text. This enables the platform to interact with users through voice.

The global Consumer-grade Multimodal Conversational AI Platform market size was estimated at USD 1231.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 26.90% during the forecast period.
