Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Consumer Grade Robot Dog competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Consumer Grade Robot Dog production reached approximately 427k units, with an average global market price of around US\$ 2300 per unit. The consumer-grade robot dog is an intelligent robot designed for ordinary consumers. It combines artificial intelligence and robotics technology and has multiple functions such as interactivity, entertainment and practicality. These robot dogs usually imitate the appearance of real dogs and can perform tasks such as companionship, interactive games, voice command response, environmental perception, and even achieve behavioral evolution and customization through deep learning. Consumer-grade robot dogs are widely used in fields such as family companionship, children's education, entertainment and leisure, and are especially suitable for user groups who want to experience the integration of technology and pets. With intelligence, ease of use and emotional connection as their selling points, they are becoming an important part of future home smart devices. The consumer-grade robot dog market has shown rapid development in recent years, mainly driven by the needs of family entertainment, education, companionship and technology enthusiasts. Unlike industrial or professional-grade robot dogs, consumer robot dogs focus on interactive experiences, intelligent movements, and entertainment features. Typical products include the Unitree Go series. This market is characterized by a wide price range: entry-level toy products range from just tens to hundreds of dollars, while high-end companion and semi-professional models can reach thousands of dollars, with an average selling price of approximately \$2,300 per unit. Regionally, home users in North America, Europe, and Asia are the primary consumer groups, with China and Japan experiencing particularly rapid growth,

benefiting from the high acceptance of smart entertainment products among young families. Technological advances, including lightweight design, vision and sensor fusion, AI motion recognition and autonomous behavior, as well as supporting mobile applications and cloud services, have enabled consumer robot dogs to possess increasingly rich interactive features, strengthening user stickiness. In terms of industry competition, leading companies are increasing their market share through product diversification and the development of a robust software and hardware ecosystem. Meanwhile, emerging startups are continuously launching innovative models, driving technology adoption and reducing costs. Overall, the consumer-grade robot dog market is expanding from niche high-end markets to broader family and education markets, and is expected to maintain a double-digit compound growth rate in the next few years, especially in the fields of smart home, STEAM education and pet companionship, where it has significant development potential.

The global Consumer Grade Robot Dog market size was estimated at USD 981.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.30% during the forecast period.
