Abstracts

Contact Model Atomic Force Microscopy Probe refers to a specialized tip used in Atomic Force Microscopy (AFM) for imaging and measuring surface properties of materials at the nanoscale level. In Contact Mode, the probe tip is brought into direct physical contact with the sample surface, and as the tip moves across the surface, it experiences attractive and repulsive forces due to the interactions between the tip and the sample. These interactions are measured and used to create a high-resolution, three-dimensional image of the surface topography. The Contact Mode AFM Probe typically has a sharp tip made of materials like silicon or silicon nitride, allowing for precise imaging and measurement capabilities.

The global Contact Model Atomic Force Microscopy Probe market size was estimated at USD 120.45 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
