Abstracts

A contact web cleaning system is an automated or semi-automated industrial cleaning solution designed to remove dust, debris, and contaminants from the surfaces of continuous materials such as paper, film, foil, textiles, or nonwovens during manufacturing or converting processes. These systems typically utilize rollers, brushes, air knives, vacuum suction, or adhesive mechanisms that make physical or close-proximity contact with the moving web to ensure surface cleanliness, which is critical for product quality, printability, coating adhesion, and defect reduction.
