Abstracts

Contactless check-in software for hotels is an intelligent management platform based on mobile internet, identity authentication, and IoT technologies. It allows guests to complete the entire process, including reservation verification, real-name registration, online payment, electronic room card generation, and door lock activation, through a mobile app, WeChat mini-program, or self-service terminal, without manual front desk intervention. This software typically integrates seamlessly with public security systems, property management systems (PMS), and smart door locks, enabling features like "face check-in," "scan code to open the door," and "remote room assignment." This effectively improves check-in efficiency, reduces operating costs, and enhances the sanitation and safety experience. Widely used in mid- to high-end hotel chains, smart hotels, and unmanned accommodation scenarios, it is a crucial tool for improving service quality and epidemic prevention capabilities in the context of digital transformation. The upstream industry chain for contactless hotel check-in software primarily includes identity authentication services (such as public security eID verification and facial recognition APIs), cloud service providers (Alibaba Cloud, Tencent Cloud), PMS (property management system) developers, smart door lock hardware manufacturers, payment gateways (WeChat Pay, Alipay), and communication technology suppliers (such as Bluetooth and NFC modules). The midstream comprises software developers and solution providers, including SaaS service providers, smart hotel technology platforms (such as Shiji Information, Zhuzhe, and Qianlima), and system integrators, responsible for platform development, system integration, deployment, implementation, and operations support. Downstream, this software is widely used by hotel chains, independent hotels, B&Bs, and unmanned hotels, enabling users to check in contactlessly via mobile devices or self-service kiosks. Within the industry chain, SaaS software and platform services offer the highest gross profit margins, reaching 60%?80%, particularly for companies with proprietary core algorithms

and multi-system integration capabilities. System integration and hardware bundled sales offer lower gross profit margins, approximately 20%-35%. Overall profitability relies on scaled subscriptions and ongoing service revenue. Leading companies are building barriers through a "software + services + ecosystem" model, driving the industry towards standardization, intelligence, and platform-based development.

The global Contactless Check-in Software for Hotels market size was estimated at USD 552.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.00% during the forecast period.
