Abstracts

The contactless elevator intelligent system is an automated system that utilizes modern technology to reduce human elevator interface contact. The system aims to improve the convenience and hygiene of elevator use, usually using the following technologies and functions: the elevator can be controlled remotely using mobile applications or other methods, and can book an elevator before reaching the elevator lobby, thereby reducing waiting time. By using cameras or sensors, ascent can be scheduled through elevators, such as waving to summon elevators or selecting floors. Elevators can tell the floor they are going to through voice commands to avoid touching buttons or keyboards. If a touch screen interface is required, the system may take protective measures, such as using antibacterial materials, regular disinfection, etc., to ensure hygiene and safety.

The global Contactless Elevator Intelligent System market size was estimated at USD 1250.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.80% during the forecast period.
