Report Overview

A contactless suspension active magnetic bearing is a type of bearing that supports a load using magnetic levitation. Contactless active bearings support moving parts without physical contact. For instance, they are able to levitate a rotating shaft and permit relative motion with very low friction and no mechanical wear. Magnetic bearings support the highest speeds of any kind of bearing and have no maximum relative speed. Contactless active bearings have several advantages: they do not suffer from wear, have low friction, and can often accommodate irregularities in the mass distribution automatically, allowing rotors to spin around their center of mass with very low vibration.

The global Contactless Suspension Active Magnetic Bearings market size was estimated at USD 2002 million in 2023 and is projected to reach USD 3411.16 million by 2032, exhibiting a CAGR of 6.10% during the forecast period.
