Abstracts

Container crane is a kind of heavy lifting equipment specially used for loading and unloading containers, which is widely used in ports, docks and container yards. These cranes are used to unload or load containers from container ships and transfer them in the yard. Port container crane is specially designed for 20-foot and 40-foot international containers, and is mainly used for stacking containers and horizontal transportation in docks and yards. Compared with forklifts, it has the advantages of flexibility, easy operation, good stability, low wheel pressure, high stacking layer, and high utilization rate of yards. Ports are accelerating the adoption of remote control and fully automatic cranes to reduce manual intervention and improve efficiency and safety. Artificial intelligence (AI) and the Internet of Things (IoT) are applied. AI optimizes container scheduling, and IoT sensors monitor equipment status in real time to improve maintenance efficiency. Ports are gradually phasing out traditional diesel power and turning to pure electric or hybrid equipment to reduce carbon emissions. Some port cranes are equipped with energy recovery technology to convert energy during braking and lifting into electricity for reuse to improve energy efficiency. Digital Twin technology simulates crane operation through real-time data to improve operational efficiency and maintenance prediction capabilities. 5G technology is combined with the industrial Internet to improve equipment networking capabilities and assist remote control and intelligent management. Global trade is driving port expansion. Major ports in Asia (especially China), Europe and North America are upgrading crane equipment to accommodate larger cargo volumes. With increasing demand in emerging markets, ports in Southeast Asia, the Middle East and Africa are accelerating infrastructure construction, driving market demand for container cranes.

The global Container Cranes market size was estimated at USD 4339.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.00% during the

forecast period.
