Abstracts

The Container Heating Jacket is an insulated, electrically powered or steam-traced external wrap designed to maintain or elevate the temperature of contents within industrial containers, such as intermediate bulk containers (IBCs), drums, or portable tanks, during storage or transport. These jackets typically consist of a durable outer shell, an insulating layer, and integrated heating elements or channels for heat transfer fluids, allowing precise temperature control to prevent solidification, maintain viscosity, or ensure chemical stability of temperature-sensitive materials like chemicals, pharmaceuticals, food products, or molten substances. They are engineered for ease of installation, reusability, and compatibility with various container sizes and shapes, often featuring adjustable straps, thermal sensors, and safety mechanisms to avoid overheating, making them essential in industries where consistent thermal management is critical to product integrity and process efficiency.

The global Container Heating Jacket market size was estimated at USD 320.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
