Abstracts

Containerised self-bunded storage tanks are specialized, portable tanks designed to safely store liquids, especially hazardous substances like fuels or chemicals. They consist of an inner tank for holding the substance and an outer containment shell, or bund, which acts as a secondary containment system in case of leaks or spills. This double-layer design ensures environmental protection by preventing spills from contaminating the surrounding area. The tanks are typically made from robust materials for durability and can be transported and relocated easily, making them ideal for use in various industries, including construction, mining, and energy.

The global Containerised Self-Bunded Storage Tanks market size was estimated at USD 1257.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the forecast period.
