Report Overview

Continuous alumina fiber is a new type of ceramic fiber, the main component is alumina, some also add other oxides to prepare different types of continuous alumina fibers. Compared with alumina staple fibers, continuous alumina fibers not only have the excellent properties of high temperature and corrosion resistance of staple fibers, but also can be wound and woven into two-dimensional and three-dimensional prefabricated bodies, which can be used as reinforcing bodies in composite materials, and are good high temperature heat insulation and refractory materials and structural reinforcing materials. The Continuous Alumina Fiber market covers Al_2O_3
