In 2024, global Continuous Casting Mold Powder production reached approximately 556.2 k Tons, with an average global market price of around 681 USD/Ton. Continuous Casting Mold Powder is a specially formulated powdered material used during the continuous casting of steel to cover the molten steel surface in the mold. Its primary functions are to provide thermal insulation, prevent oxidation of the molten metal, lubricate the interface between the solidifying steel shell and the mold wall, and absorb non-metallic inclusions. Mold powders typically consist of oxides such as CaO, SiO₂, Al₂O₃, and fluxing agents like Na₂O, as well as carbon to prevent premature sintering. When applied, the powder melts to form a molten slag layer, which plays a key role in controlling heat transfer, ensuring uniform solidification, and improving the surface quality of the final steel product.

The global Continuous Casting Mold Powder market size was estimated at USD 379.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.60% during the forecast period.
