Abstracts

A Continuous Casting Mould is a critical component in the continuous casting process, used to shape molten metal into semi-finished forms like slabs, billets, or blooms. It consists of a water-cooled, open-ended copper mold that solidifies the outer shell of the molten metal as it flows through. The mold enables rapid heat transfer while maintaining the desired geometric profile. This process is widely employed in steelmaking and non-ferrous metal industries due to its efficiency, cost-effectiveness, and ability to produce high-quality metal products with uniform properties.

The global Continuous Casting Mould market size was estimated at USD 7085.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
