Abstracts

Continuous Damping Control (CDC) damper is an advanced suspension system that continuously adjusts the damping force in real-time to optimize ride comfort and vehicle handling. It uses electronically controlled valves or other mechanisms to vary the resistance in the shock absorber, adapting to road conditions, driving style, and vehicle speed. Unlike traditional fixed-damping suspensions, CDC dampers allow for smooth transitions between different suspension settings, providing a more comfortable ride without compromising performance. The system can be integrated with other vehicle dynamics systems, such as stability control, to enhance overall driving safety and comfort. It is commonly used in high-performance and luxury vehicles to provide a dynamic and customizable driving experience.

The global Continuous Damping Control Cdc Damper market size was estimated at USD 558.77 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 10.10% during the forecast period.
