Abstracts

Continuous Damping Control (CDC) is an advanced suspension system that continuously adjusts the damping force of a vehicle's shock absorbers in real-time to optimize ride comfort and handling performance. The system uses electronic sensors to monitor road conditions, vehicle speed, and driving behavior, adjusting the shock absorber settings on the fly to provide a balance between softness for comfort and stiffness for better handling. Unlike traditional passive suspension systems, which offer fixed damping, CDC allows for a more dynamic and adaptable ride by altering suspension stiffness based on the conditions, resulting in improved stability, reduced body roll, and enhanced overall driving experience.

The global Continuous Damping Control System market size was estimated at USD 560.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.10% during the forecast period.
