Abstracts

Continuous-flow portable oxygen concentrators are medical devices that provide a steady stream of oxygen to individuals with respiratory conditions, such as COPD or emphysema. Unlike pulse dose concentrators, which release oxygen in bursts, continuous-flow units deliver a constant flow of oxygen regardless of the user's breathing pattern. These concentrators are typically used for patients who require a higher and more consistent level of oxygen. While larger than pulse dose models, they offer reliable oxygen delivery and are often used for home use or when higher flow rates are needed. Some models are also portable, allowing users more mobility with oxygen therapy.

The global Continuous-flow Portable Oxygen Concentrators market size was estimated at USD 517.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 1.80% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Continuous-flow Portable Oxygen Concentrators market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
