### Report Overview

Continuous galvanized rebar refers to a type of reinforcing steel bar that has undergone a galvanization process to enhance its durability and resistance to corrosion.

Galvanization involves coating the rebar with a layer of zinc, creating a protective barrier against moisture, chemicals, and environmental factors that can cause corrosion. The process involves immersing the rebar in a bath of molten zinc or applying a zinc coating through a hot-dip or electroplating process. Continuous galvanized rebar is widely used in construction projects, especially in concrete structures situated in corrosive environments such as coastal areas, bridges, and infrastructure subjected to deicing salts.
