The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Continuous Galvanometer Laser Welding Machine competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of continuous galvanometer laser welding machines will reach 4166 units, with an average selling price of US\$75k per unit. Continuous galvanometer laser welding machines are a type of advanced welding equipment that utilizes a continuous fiber laser as a light source and a high-speed galvanometer scanning system for precise beam oscillation and trajectory control. Unlike pulsed or spot welding galvanometer systems, continuous galvanometer laser welding machines are capable of achieving continuous welds, deep penetration welds, and high-power density, high-speed welding on the workpiece surface. They offer advantages such as high welding efficiency, uniform weld formation, deep penetration, a small heat-affected zone, and the ability to achieve diverse weld trajectories (straight, circular, and wavy). Typical applications are concentrated in welding tabs and modules for power batteries in new energy vehicles, precision structural components for 3C electronic products, optical communication devices, medical devices, precision sheet metal, and high-end equipment manufacturing. They are particularly suitable for applications requiring high welding consistency and automation levels. With the expansion of power battery production capacity and the upgrading of high-end manufacturing, continuous galvanometer laser welding machines are becoming a key alternative to traditional resistance welding and pulse welding, and market demand is growing rapidly.

The global Continuous Galvanometer Laser Welding Machine market size was

estimated at USD 312.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.70% during the forecast period.
