The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Continuous Green Laser competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A continuous green laser is a device that can stably output a green continuous laser with a wavelength of about 532 nanometers. It is mainly obtained by converting the infrared laser (such as 1064nm Nd:YAG laser) through a frequency doubling crystal (such as KTP) for frequency conversion (frequency doubling). This type of laser has the advantages of high beam quality, concentrated energy density, and strong visibility. The common output power ranges from tens of milliwatts to tens of watts. The output mode is mostly continuous wave (CW), and some also support modulation or mode-locked operation.

The global Continuous Green Laser market size was estimated at USD 155.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Continuous Green Laser market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
