Abstracts

Continuous Ink Jet (CIJ) ink is a specialized fluid used in non-contact printing technology where droplets of ink are continuously generated and selectively deflected onto substrates to form characters, codes, or graphics, primarily for industrial marking and coding applications such as expiration dates, batch numbers, barcodes, and logos on products across various industries including food and beverage, pharmaceuticals, cosmetics, and electronics. These inks are formulated to meet stringent requirements for fast drying, adhesion, durability, and resistance to environmental factors like moisture, heat, or abrasion, and they often come in solvent-based or water-based formulations tailored to specific substrates like porous and non-porous surfaces, with key properties including viscosity, conductivity, and pigment dispersion optimized for reliable jetting and high-quality print results in high-speed production environments.
