Report Overview

Inorganic fibers are created with a process of spinning through melting condition that can be used with fibers that come out from melting materials (glass, mineral fibers). Carbon fibers, ceramic ones, and others are made from organic fibers, and these precursors are thermally degraded. Continuous inorganic fiber is a continuous fiber made of inorganic materials. Unlike traditional organic fibers such as cotton, silk, nylon, etc., continuous inorganic fibers are usually made of inorganic materials such as metals, ceramics, glass, etc. Continuous inorganic fibers have many advantages, including high strength, high temperature resistance, corrosion resistance, and wear resistance. These characteristics make continuous inorganic fibers widely used in many fields, such as aerospace, automotive manufacturing, building materials, etc.
