Report Overview

Basalt Fiber is a material made from extremely fine fibres of basalt, which is composed of the minerals plagioclase, pyroxene, and olivine. It is similar to carbon fibre and fibreglass, having better physic mechanical properties than fibreglass, but being significantly cheaper than carbon fibre. It is used as a fireproof textile in the aerospace and automotive industries and can also be used as a composite to produce products such as camera tripods.

Basalt Fiber is made from a single material, crushed basalt, from a carefully chosen quarry source and unlike other materials such as glass fibre, essentially no materials are added. The basalt is simply washed and then melted.
