Abstracts

The continuous zoom medium-wave cooled thermal imager is an infrared imaging device that can perform high-resolution imaging in the medium-wave infrared band (3-5 μ m) and provide continuous zoom function. It is suitable for application scenarios that require long-distance observation and fine detail capture, such as security monitoring, border patrol and equipment detection. Its cooling technology improves imaging sensitivity and provides clear images even in low light or complex weather conditions, thereby achieving more efficient target recognition and detection. The growth prospects of medium-wave cooled thermal imagers with continuous zoom are good, mainly driven by the increasing demand in the military, security and industrial detection fields. In defense and border monitoring, such equipment has become a key tool with its high resolution and long-range detection capabilities. In addition, with the rising demand for smart manufacturing and infrastructure monitoring, the demand for long-range thermal imaging detection in the industrial field is also increasing. Technological advances, such as the development of refrigeration technology and optical systems, have improved the resolution and sensitivity of thermal imagers, and the continuous zoom function meets the diverse application needs in complex scenarios. At the same time, the integration of AI intelligent analysis also enables the equipment to have new functions such as anomaly detection and automatic tracking, further enhancing its application value. At present, the market is mainly dominated by well-known international brands, but with the growth of demand in Asia and the Middle East, and the participation of more local companies, market competition has gradually intensified and product choices have become more diverse. However, due to the high technical and cost barriers, the price of such equipment is relatively high, which may affect the acceptance of some users. Overall, the market for medium-wave cooled thermal imagers with continuous zoom is expected to maintain steady growth in the future,

driven by technological maturity and cost optimization.

The global Continuous Zoom Medium Wave Cooled Thermal Imager market size was estimated at USD 816.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.00% during the forecast period.
