Abstracts

Contour grinding services refer to a type of precision machining service that involves grinding work - pieces into specific shapes or contours. Contour grinding is a grinding operation in which the grinding wheel or the part follows a machine - generated contour. That is, through the relative movement of the grinding wheel and the work - piece, the shape of the grinding wheel is used to remove the excess material of the work - piece, so as to obtain the required contour shape. It can process work - pieces with high precision, and the tolerance can reach 0.0002 inches or even higher in some cases. This enables the production of parts with complex shapes, such as gears, impellers, and some precision components in aerospace and medical devices. It is suitable for a variety of materials, including metals (such as aluminum, brass, bronze alloys, carbon steel, stainless steel, etc.) and non - metals (such as borosilicate glass, fused silica, ceramics, etc.).

The global Contour Grinding Services market size was estimated at USD 1407.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.20% during the forecast period.
