Abstracts

Contract slide grinding is a process whereby professional surface treatment service providers, on a client-ordered basis, provide deburring, chamfering, surface polishing, and smoothness enhancement services for metal, plastic, or ceramic workpieces in batches. The core process utilizes a sliding grinder (also known as a drum grinder or vibration grinder) to place the workpiece, abrasive, and chemical additives within a container. Vibration or rolling creates a continuous friction between the workpiece surface and the abrasive, thereby removing tiny burrs, oxide layers, or surface defects. This model is suitable for manufacturers who lack their own grinding equipment or are unwilling to invest in expensive production lines. It is particularly widely used in industries such as precision hardware, watches, jewelry, medical devices, and automotive parts. It offers advantages such as high processing consistency, low unit cost, and the ability to flexibly adjust process parameters based on the material and target surface effect.

The global Contract Slide Grinding market size was estimated at USD 1217.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
