Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Controllable Point Pipeline Repair System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of Controllable Point Pipeline Repair System will reach 152,100 units, with an average selling price of US\$19,000 per unit. The Controllable Point Pipeline Repair System (CPPRS) is a trenchless technology solution for repairing localized defects in underground pipelines. It precisely locates pipeline damage points (such as cracks, leaks, and misaligned joints) and delivers prefabricated repair materials (such as fiberglass reinforcement sheets, UV-curable sleeves, or heat-curable patches) to the target location via a robotic or airbag system. Under control, the system then applies pressure, heat, or light to cure the material at the targeted location, completing the local structural reinforcement and sealing repair. This system boasts a short construction cycle, minimal disruption, high positioning accuracy, and strong adaptability, making it widely used in urban drainage, industrial pipelines, and petrochemical pipelines. Compared to traditional full-section lining repairs, the CPPRS emphasizes "precise intervention," enabling localized repairs without disrupting overall pipeline network operations. It is particularly suitable for isolated defects or early-stage defects discovered during pipeline operation.

The global Controllable Point Pipeline Repair System market size was estimated at USD 289.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
