Abstracts

Controlled (Coated) Release Fertilizer (CRF) is a type of granulated fertilizer designed to release nutrients slowly and steadily over an extended period. Unlike conventional fertilizers, which dissolve quickly in water and release nutrients immediately, CRF uses a controlled mechanism, where the solubility of the fertilizer's chemical compounds is intentionally slowed. This slow-release effect can be achieved by using an insoluble substrate or a semi-permeable coating around the granules, allowing the nutrients to diffuse gradually into the soil as needed by plants, reducing the risk of nutrient loss through leaching or volatilization.

The global Controlled Coated Release Fertilizer market size was estimated at USD 4059.07 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.00% during the forecast period.
