### Report Overview:

Controlled-release fertilizer (CRF) is a granulated fertilizer that releases nutrients gradually into the soil (i.e., with a controlled release period). The slowness of the release is determined by the low solubility of the chemical compounds in the soil moisture. Since conventional fertilizers are soluble in water, the nutrients can disperse quickly as the fertilizer dissolves. Because controlled-release fertilizers are not water-soluble, their nutrients disperse into the soil more slowly. The fertilizer granules may have an insoluble substrate or a semi-permeable jacket that prevents dissolution while allowing nutrients to flow outward.

The Global Controlled-Release Fertilizer Market Size was estimated at USD 1507.12 million in 2023 and is projected to reach USD 1810.09 million by 2029, exhibiting a CAGR of 3.10% during the forecast period.
