### Report Overview

Controlled-release fertilizers are fertilizers encapsulated inside a coat that slowly releases nutrients over time. This slow release increases the probability that nutrients will be taken up by the roots. This results in fewer losses (i.e., greater nutrient-use efficiency) and reduced pollution potential.

Controlled-release fertilizers are also called coated or encapsulated fertilizers because the release is controlled by a polymer coating that contains a water-soluble fertilizer. Nutrients are released out of coated fertilizer through osmosis at a rate that is positively correlated with increased temperature.

The major players in United States Controlled-release Fertilizers market include Agrium, J.R. Simplot, etc. The top 2 players occupy about 70% shares of the whole market. Missouri and Idaho are main markets, they occupy about 70% of the whole market. Polymer/ Sulphur-Coated Products is the main type, with a share over 50%.
