Abstracts

Controlled-release transdermal patches are topical preparations that slowly and continuously release drugs into the body through the skin. They use special controlled-release technology to adjust the drug release rate, thereby achieving the purpose of stabilizing blood drug concentrations, prolonging drug efficacy, and reducing the frequency of dosing. The patch is usually composed of a drug carrier, a controlled-release membrane, and an adhesive layer. It is suitable for multiple therapeutic areas such as analgesia, hormone replacement, and addiction treatment. It has the advantages of being easy to use, avoiding first-pass effects, and improving patient compliance.
