Abstracts

A conventional aircraft tug is a specialized ground support vehicle designed to maneuver aircraft on the ground when they are unable to use their own power, typically in airport environments such as aprons, hangars, or taxiways. These vehicles are essential for pushing back aircraft from terminal gates, towing them to maintenance areas, or repositioning them on the tarmac. They vary in size and capacity to accommodate different types of aircraft, from small general aviation planes to large commercial airliners. Key features often include low-profile designs for operating under aircraft noses, robust coupling mechanisms for secure attachment, and diesel, electric, or hybrid powertrains tailored to operational demands and environmental regulations. Their primary function is to enhance operational efficiency, reduce ground time, and ensure safety by minimizing the risk of collisions or engine use in congested areas.

The global Conventional Aircraft Tugs market size was estimated at USD 980.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.85% during the forecast period.
