Abstracts

Conventional Island Devices refer to the non-nuclear components of a nuclear power plant, encompassing the turbine-generator set, condenser, feedwater system, steam generators (in some designs), and associated auxiliary systems responsible for converting thermal energy from the nuclear reactor into electrical power. These systems are critical for power generation efficiency and operational reliability, functioning as the interface between the nuclear steam supply system and the electrical grid. The market for these devices is intrinsically linked to the nuclear energy sector, driven by new plant constructions, life extensions of existing facilities, and retrofitting projects aimed at enhancing performance, safety, and output. Demand is influenced by global energy policies, regulatory frameworks, public acceptance of nuclear power, and advancements in turbine and thermal efficiency technologies. Key players include specialized heavy engineering firms and conglomerates with expertise in large-scale power systems, competing on innovation, reliability, and integration capabilities with both existing and next-generation reactor designs.

The global Conventional Island Devices market size was estimated at USD 9500.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
