Abstracts

Conveyor chute liners are specialized wear-resistant protective layers designed for conveyor chutes, aimed at reducing impact and abrasion caused by materials sliding or falling within the chute. These liners are typically made from materials such as wear-resistant rubber, polyurethane, ceramic, or composite compounds, offering excellent impact resistance and corrosion tolerance to accommodate various materials like ores, coal, and gravel. Their surfaces may be smooth or textured to optimize material flow, minimize blockages, and reduce dust generation. Additionally, chute liners feature flexible installation methods, including bolting or bonding, for easy maintenance and replacement. In industries such as mining, ports, and construction materials, conveyor chute liners are critical for enhancing conveying efficiency and reducing equipment wear, with their performance directly influencing the continuity and cost-effectiveness of production lines.

The global Conveyor Chute Liners market size was estimated at USD 855.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the forecast period.
